

SCALING-UP* RECOMMENDATIONS

- 1. SCALING-UP 101
- 2. Geospatial Targeting
- 3. Dynamic Modeling

Jawoo Koo j.koo@cgiar.org * Increasing the reach of Africa RISING...?

e.g., # of farmers, or acres, that use the new, sustainable intensification management practices introduced by AR

SCALING 101 FOUR THINGS TO KEEP IN MIND

- 1. Not all programs can (or should) be scaled up
- 2. Multiple pathways for scaling up. The choice depends on the program, target scale, and the environment (spaces)
- 3. Scaling strategy usually requires tradeoffs between scale, impact, cost and equity
- 4. Principal challenges are:
 - Aligning incentives: political, economic, social
 - Effective implementation capacity at scale
 - Unit production and delivery costs vs. fiscal constraints
 - Market demand

SCALING-UP IS DIFFERENT FROM PROJECT MANAGEMENT

PROJECT

- 1. Linear
- 2. Beneficiaries and Non-Beneficiaries
- 3. Clear ownership and decision rights
- 4. Dedicated Resources
- 5. Skills: technical, management & financial

SCALING-UP

- 1. Non-linear & Iterative
- 2. Winners and Losers
- Multi-stakeholder, "Nobody-in-Charge"
- 4. Usually not resourced
- 5. Skills: Boundary spanning, system strengthening, advocacy, aligning incentives

SCALING 101

CREATING A SCALING UP STRATEGY

- 1. Assess Scalability
- 2. Identify the Model: What needs to be scaled up?
- 3. Identify the Small-Scale Context: Organization, Environment and System
- 4. Setting Goals for Scaling Up (Where)
- 5. Analyze Spaces (Large Scale Context & Environment)
- 6. Choose Roles and Pathways
- 7. Align the Model, Goals/Vision, Spaces and Pathways
- 8. Assign Organizational Responsibility, Resources and Skills for Leading Scaling Process
- 9. Creating Pre-Conditions/Spaces (Financial, Organizational, Political, and Policy)
- 10. Implementation, Monitor/Adapt, and Sustainability

SCALING 101

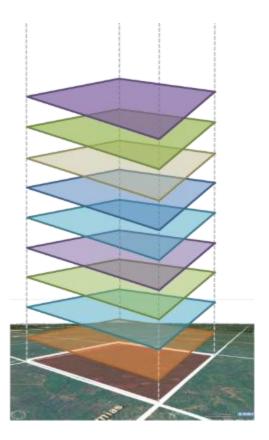

WHAT MAKES A MODEL SCALABLE?

- 1. Credible: evidence of success, endorsements, causality
- 2. Observable: you can see and feel the results
- 3. Relevant: relates to objectively important issues, policy priorities, felt needs of beneficiaries (actual demand vs. objective need)
- 4. Winners and Losers: who are the stakeholders who will benefit or lose from large scale implementation? Relative power?
- 5. Clear Advantage: over existing policy, programs, practices or other promising new alternatives i.e. cost effective
- 6. Easily Implementable (intrinsic): in new contexts, beneficiaries
- 7. Easy to Adopt and Transfer (extrinsic): compatible with existing organizational capabilities or feasible and affordable capability building (space exists and is easily created)
- 8. Affordable: Within financial/budgetary constraints at scale (unit cost x desired scale), or price point within means of target users

Align as much as possible with pre-existing spaces!
